

*New Earth Solutions offers a fully audited process, including product support and full traceability*

# products of composting

*Our compost products are accredited by the The Association for Organics Recycling*

The New Earth Solutions composting process offers customers a fully audited procedure, including product support and full traceability; Animal By Product Regulation (ABPR) compliance, and an end product guaranteed to meet the British Standards Institute specification PAS100:2005. Our compost products are accredited by the The Association for Organics Recycling, and constitute high quality soil improvers, suitable for agricultural,

landscaping and domestic use. All products of composting are subject to comprehensive laboratory testing, details of which are available to end users under our product support service, with additional information on the range of applications that specific products are suitable for. The composting process is fully audited. New Earth maintains comprehensive records of all compost produced and is able to supply end products in a range of formats including retail bags,

trade supplies and bulk deliveries. With consideration for the carbon footprint of the process, particular emphasis is given to the production of composts for use within local growing systems, in order to minimise transportation requirements. Our innovative composting process incorporates active aeration, dynamic windrowing and irrigation. The combination of these key elements results in a process that can compost meat-included catering wastes to both the UK

and EU standards of the Animal By Product Regulations, producing a finished product that meets the British Standards Institution PAS100:2005 specification. New Earth Solutions is keen to support the preservation of natural peat resources and is working with specialist horticulturalists to produce peat substitute products from its processes.

- High Quality, Sanitised Composts
- Produced to BSI PAS100:2005
- Accredited by The Association for Organics Recycling
- Product Testing Service
- Full Traceability

The New Earth Solutions composting system tackles kitchen, catering and green waste effectively

All end use products are guaranteed to a high quality: safe and of benefit in a range of applications

Comprehensive audit trails and customer support ensure full traceability and access to product information

# quality

The Advanced New Earth Solutions Composting System

The New Earth Solutions composting process produces a range of high **quality** end products. All composts produced from segregated organic waste streams meet the British Standards Institute specification PAS100:2005. Particular emphasis is given to the production of composts for use within local growing systems in order to minimise transportation requirements.
